

AC RATIO BRIDGE

- Calibration of Voltage and Current Transformers from a Single Instrument
- Calibration of Instrument Transformers with Different Rated Ratios Using One Single Reference Standard
- Calibration of Voltage Transformers (VT) up to 800 kV When Used with MI 2500 Series of HV Dividers and Standard Capacitors
- Calibration of Current Transformers (CT) up to 10000 A When Used With MI 7020 and/or 7200 Series of Precision Current Transformers and/or Current Comparators
- Short Measurement Times with High Accuracy and Low Inherent Burdens
- Instrument Applications are Valid for Single Phase Measurements. Three Phase Transformers Measurements Performed by Testing Each Phase Separately
- Test Frequency from 15 to 100 Hz

MODEL 7070A

MODEL 7070A AC RATIO BRIDGE

The accurate measurement of electric energy in high voltage, high current distribution systems relies on 3 key components: a Watt-hour meter, a high voltage transformer and a high current transformer to step down the high voltage and high current to accurate low levels for input to the kWh meters or other electrical measuring devices. However, if the instrument transformers are not calibrated with similar accuracy, then the precise measurements made by the measuring devices will be with high uncertainty and misleading. For high voltages and currents, this inaccuracy can have a significant impact on the result. Therefore, calibration of the instrument transformers has become increasingly important.

Measurements International (MI) has many years of experience in high voltage and high current engineering. Beginning with single instruments such as automated high voltage capacitance bridge, high voltage dividers and Wattmeter to high complex systems like power calibration system, Automated Load Loss Measurement System (ALMS) and isolating current transformer (ICT) system. MI is also 17025 accredited for both in-house and on-site calibration of these measurements. This capability authenticates not only our credentials as a industry-leading instrument developer but also as calibration service provider for instrument transformers.

The model 7070A series of AC ratio bridges developed at MI are fully automated for fast and accurate measurements of instrument transformer errors. The 7070A is easily integrated in complex system to achieve calibration of voltage transformers up to 800 kV and current transformers to 10,000 Amps. The 7070A will set new standards of measurement in the calibration of instrument transformers.

The 7070A multi-range design allows to cover a wide range of measurements ratio with minimum number of reference standard when calibrating current transformer.

MODEL 7070A AC RATIO BRIDGE

MI 7070A Models

Three different models are available that operate with MI or other supplier of standards related to the calibration of both voltage transformers and current transformer. These models consist of the following:

Model 7070A-I

The model 7070A-I is an AC Current Ratio Bridge and its main application is the calibration of current transformers using a reference CT, such as the MI 7020 series or other manufacturer reference CT. The 7070A-I has 10 input current ranges as follows: 5, 2, 1, 0.5, 0.2, 0.1, 0.05, 0.02, 0.01 and 0.005 A. Higher testing currents can be achieved using external precision CTs. The high number of input current ranges gives the flexibility of using one single ratio reference CT to test current transformers of different rated ratios. Figure 1 shows the setup diagram for testing current transformers.

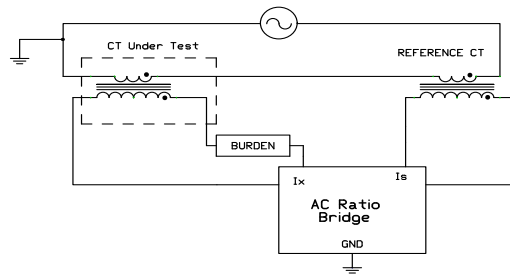

Figure 1. Model 7070A-I Current Transformer Configuration

Model 7070A-U

The model 7070A-U is an AC Voltage Ratio Bridge and its main application is the calibration of voltage transformers using either a standard reference voltage transformer or a high voltage standard capacitor and standard reference voltage divider. The 7070A-U has two input voltage ranges, 60 and 120 Volts.

Only one setup is needed to test voltage transformers when the 7070A-U is combined with a high voltage standard reference capacitor and MI 2500 series high voltage divider. In this case the HV divider rated output is 100 V on each range. The HV divider output voltage and the UUT output voltage are applied directly to the input voltage channels of the AC Voltage Ratio Bridge. Figure 2 and figure 3 show the setup diagrams for testing voltage transformers using MI HV divider or a standard reference VT.

Figure 2. Model 7070A-U Voltage Transformer configuration using a high voltage capacitor and MI HV divider.

Figure 3. Model 7070A-U Voltage Transformer configuration using a high voltage reference potential transformer.

MODEL 7070A AC RATIO BRIDGE

Model 7070A-UI

The model 7070-UI is an AC Ratio Bridge that combines AC current and voltage ratio measurement capabilities. It provides the user with the convenience of one single measuring unit to calibrate VTs and CTs without losing accuracy. Its main application is for VT and CT test sets. However, the combination of voltage and current inputs can also be used to perform power measurements. The flexibility and high accuracy of this design can be a single instrument solution for multiple measurements at any AC lab. The block diagram for the 7070A-UI is shown in Figure 4.

Measurement Systems

MI designs and supplies system solution for current and voltage transformer measurements customized for specific requirement. Some of the system components are listed below:

1. 7020 series of Standard Current Transformers
2. 7200 series of Current Comparators
3. 2500 series of Voltage Dividers
4. Model CG series of High Voltage Capacitors
5. Electronic burdens
6. Computer and printer for external control and data recovery.

MODEL 7070A AC RATIO BRIDGE

Specifications: Rev 1

Model No.	7070A-I	7070A-U	7070A-UI
Input Channels	2	2	4
Current Measurements			
Input Ranges per Channel (A)	0.005, 0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1, 2, 5	N/A	0.005, 0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1, 2, 5
Current Accuracy (ppm of FS) @ 50/60 Hz (23 °C ± 5 °C)	± 50	N/A	± 50
Ratio Accuracy (ppm) (23 °C ± 5 °C)	± 75 For $0.5 \leq I_x/I_s \leq 2.0$	N/A	± 75 For $0.5 \leq I_x/I_s \leq 2.0$
	± 100 For $0.5 \geq I_x/I_s \geq 2.0$	N/A	± 100 For $0.5 \geq I_x/I_s \geq 2.0$
Phase Shift Accuracy (min) (23 °C ± 5 °C)	± 0.2 For $0.5 \leq I_x/I_s \leq 2.0$	N/A	± 0.2 For $0.5 \leq I_x/I_s \leq 2.0$
	± 0.4 For $0.5 \geq I_x/I_s \geq 2.0$	N/A	± 0.4 For $0.5 \geq I_x/I_s \geq 2.0$
Linearity (ppm)	≤ 20	N/A	≤ 20
Input Impedance (Ω)	≤ 3.5	N/A	≤ 3.5
Isolation (V _{pp})	600	N/A	600
Frequency Range (Hz)	15 to 100	N/A	15 to 100
Voltage Measurements			
Input Ranges per Channel (V)	N/A	60 and 120	120 and 240
Voltage Accuracy (ppm of FS) @ 50/60 Hz (23 °C ± 5 °C)	N/A	± 50	± 50
Ratio Accuracy (ppm) (23 °C ± 5 °C)	N/A	± 75 For $0.5 \leq V_x/V_s \leq 2.0$	± 75 For $0.5 \leq V_x/V_s \leq 2.0$
	N/A	± 100 For $0.5 \geq V_x/V_s \geq 2.0$	± 100 For $0.5 \geq V_x/V_s \geq 2.0$
Phase Shift Accuracy (min) (23 °C ± 5 °C)	N/A	± 0.2 For $0.5 \leq V_x/V_s \leq 2.0$	± 0.2 For $0.5 \leq V_x/V_s \leq 2.0$
	N/A	± 0.4 For $0.5 \geq V_x/V_s \geq 2.0$	± 0.4 For $0.5 \geq V_x/V_s \geq 2.0$
Linearity (ppm)	N/A	≤ 20	≤ 20
Input Impedance (kΩ)	N/A	500 @ 60 V Range 1000 @ 120 V Range	500 @ 120 V Range 1000 @ 240 V Range
Frequency Range (Hz)	N/A	15 to 100	15 to 100
